

Project Profile :: Railways

Bath Spa Station Ticket Hall Redevelopment

Client: Oxford Architects

Scott White and Hookins' Role:

-  Civil Engineering
-  Structural Engineering

Working with First Great Western and Oxford Architects to deliver the redevelopment of the ticket hall at Bath Spa Station. The existing ticket hall configuration led to congestion at busy times. As part of the development the former rail arches under the adjacent viaduct were to be opened up to incorporate retail space on a speculative basis. The building is listed and in a conservation area. One complex aspect of the project was to introduce a new stone arch into one of the main supporting walls to the station platforms above. SWH designed and detailed all the necessary permanent and temporary works for the redevelopment and obtained NWR and landlords approval for the work.
