

Project Profile :: Education Cranfield University

Client: Cranfield University

Scott White and Hookins' Role:

 Civil Engineering

 Highway Engineering

Scott White and Hookins were appointed by the University undertake the design and project management work for a major road refurbishment in three phases at the Cranfield Campus.

The work included assessment of the condition of all existing car park, roads and footpaths. We prepared a detailed report and costing together with recommendations on phasing and extent of remedial works.

Our design involved a realignment of a number of footpaths and roads and improvement to allow better circulation of pedestrians and vehicles around campus.

Civil engineering projects at the campus have also included a traffic management scheme design, car parks and the refurbishment of the runway.
