

Project Profile :: Bespoke - Place of Worship Kings Community Church, Southampton

Client: Kings Community Church

Scott White and Hookins' Role:

 BREEAM Assessors

Target rating- Very Good
BREEAM **Very Good** Certified

New build Church auditorium on the outskirts of Southampton. Early feasibility studies were carried out in order to maximise the reduction in CO2 emissions via use of Low and Zero Carbon technologies with air source heat pumps with heat recovery were utilised. This helped provide an overall reduction of 11% in the final building.

A number of sustainable features were incorporated within the design and tailored to suit the building use including a BMS with extensive energy sub metering was also incorporated into the proposals to allow usage to be monitored, reviewed and where necessary adapted over time.
