

Project Profile :: Retail

Sainsbury's, Stroud Green Road

Client: Sainsbury's

Scott White and Hookins' Role:

 Structural Engineering

 Civil Engineering

Multi-storey new build development adjacent to Finsbury Park station in London. The project involved the demolition of an existing single storey building and replacement with a new 5 storey plus basement development with a ground floor/ basement retail unit and upper floor residential accommodation. The footprint of the structure utilised virtually the full building plot and steel sheet piling in conjunction with a concrete frame was used up to a first floor transfer slab- with timber frame above.

Scott White and Hookins were Structural and Drainage Engineers for the scheme from concept design through to completion- including the detailing of later structural alterations to the lower levels to incorporate Sainsbury's specific requirements for the creation of a existing "Sainsbury's Local" store.
