

Project Profile: Healthcare

Structural/Civil Engineering
CDM Consultants
Sustainability and BREEM

James Paget University Hospital,
Norfolk

SWH provided structural and civil engineering services. Alongside the BREEM Assessor role, for this seaside-inspired hospital building.

Client
James Paget University NHS Trust

The project at James Paget University hospital included a new 'landmark' family-centred, environment building, to accommodate a range of care services, providing its users with practical, psychological, and clinical advice and help.

The structural challenge has been the design of 'free form' double curvature shell. The concept takes a sea-side context and the notion of 'ark' as a place of refuge to wrap together the internal and external spaces that represent the social heart of the building.

A 'green' roof has been designed over most of this area provides visual amenity for adjacent hospital buildings overlooking the Centre.
